

# Water heaters from Beaumont

Business and Facilities News is extremely pleased to award Beaumont Water Heaters with the prestigious Company of the Month award. This is due to the company's outstanding customer service and the large product range offered to its customers.

Established by Maurice Maton in 1966, Beaumont Water Heaters have been designing, supplying, installing and servicing water heating systems for over forty years, and they continue to stand by their commitment to staying at the forefront of water heater design, which enables their boilers to be more reliable and efficient.

Specialising in commercial water heaters, Beaumont can supply, fit, service and maintain boilers for a wide variety of companies and customers, from schools and hotels, to Government buildings and even palaces.

Thanks to the heat exchange systems used in Beaumont's boilers and heaters, they can ensure that a lot less energy is required than most other heating systems. This in turn reduces running costs, enabling companies to save plenty of much needed cash for other aspects of their business. In fact, Beaumont can guarantee, and demonstrate, that their boilers operate at up to 97% efficiency.

Beaumont can boast an impressive bank of experience and claim to provide the most reliable and long-lasting water heaters in their field. They can claim the credit for water heaters all over the country that are still going strong, even after having been fitted over thirty years ago.

Something they are particularly proud of is their reactive maintenance service. This package comprises a comprehensive de-scaling of units and a full service. The result of this work is that the systems are brought back to full efficiency, and for optimum effectiveness, Beaumont recommend that this is carried out annually. The cost can vary between as little as £50, all the way up to £30,000, depending on the type of work and the size of the heater.

Another aspect of their service is the Hire and Leasing Division. This is for customers who perhaps cannot afford to purchase the systems completely, or for those who only need them on a temporary basis. Companies can lease the products by the month, or by the year.

After nearly half a decade of such high levels of success, it is easy to see why Beaumont felt the necessity to expand recently. Still based on their original site in Landford, Wiltshire, an extra unit has been added to increase production. As well as this development, there are also plans in the pipeline to extend the Hire and Leasing division, offering more services to more customers.

Highlights of Beaumont's impressive water heater range include The V Series, The Energy Master and the Mini Master. The V series is a stainless steel heat exchanger which can boast 79% thermal transmission efficiency, a feed diffusion plate and close control of flow temperature. It also has the added advantage of not having a fragile glass lining, no stratification and no need for cathodic protection.

The Energy Master is a direct fired water heater, which benefits from a horizontal storage design and a scale shedding heat exchanger. It is very energy efficient, can be used with a wide choice of fuels and is easily maintained for a longer life span.

The Mini Master is also a direct fired water heater, but has a compact and low profile. Like the Energy Master, this heater can also boast a high level of energy efficiency as well as having a choice of fuels and a scale shedding heat exchanger.

As well as these terrific products, Beaumont can also offer their customers increased peace of mind with not one, but two warranty support packages. Buyers can choose the standard warranty support, which is automatically included with every new sale of a water heater. This lasts for one year and covers any parts that may need to be replaced, and a testing and inspection service. Or, customers can opt for the extended warranty support which is tailor-made to meet customers' specific needs and requirements. This extended warranty lasts for five years

and comprises a service level agreement, emergency call out and testing and inspection services, as well as parts and maintenance cover.

**Beaumont welcome enquiries from anyone interested in their boilers, and can be contacted by telephone on 01794 324900 or through their website at [www.beaumont-heaters.co.uk](http://www.beaumont-heaters.co.uk)**

**TWIN BURNERS**  
Twin burners guarantee continuity of hot water supply while either one of the burners is being serviced. Each burner provides 50% of the duty.
